Community Decision Support Tool for Housing Issues Demonstration Version

This dashboard displays data from several different housing data sources, referenced in the Data sources and definitions tab. The data in this dashboard is available for up to three levels of geography depending on the data source, ranging from provinces and territories down to cities, towns and townships.

Use the dropdown menus in the top-right of each tab to select the geography you would like to view data for. The geography selectors only affect the tab you are viewing.

Each tab of this dashboard displays the data from a different data source. Use the buttons on the Welcome Page or the tabs at the bottom of the screen to navigate the dashboard.

This Tableau dashboard was produced by the Community Data Program, an initiative of the Canadian Community Economic Development Network. This project entitled "Developing Easy-To-Use Community Decision-Making Tools To Help Achieve National Housing Strategy Goals" received funding from the National Housing Strategy under the NHS Solutions Labs, however, the views expressed are the personal views of the author and CMHC accepts no responsibility for them.
